

## NEWCELL® IV

NewCell® IV therapy at Alive IV Clinics™ is an effective way of delivering high doses of key nutrients directly into the blood stream.

The IV method means higher amounts are available to your cells compared to tablets, with the potential to help your body function at its best!

## NEWCELL® MAY ASSIST:

- Energy
- Focus
- Performance
- Stamina
- Sleep
- Recovery
- Mood
- Stress
- Immunity
- Nutritional deficiency

## PRE-APPOINTMENT CHECKLIST!

1. Ensure you have completed the patient forms emailed to you on booking with your most up-to-date and accurate information
2. Ensure you are adequately hydrated
3. Ensure you have had something to eat before attending your appointment

CLINICS

NewCell® IV Vitamins  
For Lifestyle Achievers™

Alive IV Clinics™ has a select range of signature and proprietary IV treatments available. Our NewCell® brand is only available at Alive IV Clinics™ and our accredited partner clinics.

We are proud to offer only the highest quality vitamins, minerals and antioxidants in our NewCell® treatments, sourced from Australia's leading supplement manufacturers.

Our flagship treatments are suitable for everyone, and primarily differ based on their strength (and a few other things).

Most of our patients choose the NewCell® Recharge treatment.

IV treatments have the potential to support a healthy lifestyle and immune system, and may help with energy and stamina.

Many people just like you are already experiencing the benefits of our IV treatments!

## NEWCELL® REFRESH \$179

Contains vitamin B complex, standard strength vitamin C, calcium, potassium, sodium, chloride, H2O.

Ideal for a quick boost, and to maintain health and wellness.

“Refresh’ is great if you just need something small, and want to add in a quick boost in between your usual ‘Recharge’ or ‘Revive’ treatments.

## NEWCELL® RECHARGE \$269

Contains zinc, vitamin B complex, double strength vitamin C, calcium, sodium, potassium, chloride, H2O.

A more intensive treatment with added zinc, and more vitamin C than ‘Refresh’.

This treatment is our most popular one, and has been designed as a go-to treatment for most concerns.

Most of our clients use ‘Recharge’ as their regular treatment, and add in a ‘Refresh’ or ‘Revive’ here and there as needed.

## NEWCELL® REVIVE \$359

Contains GSH, zinc, vitamin B complex, triple strength vitamin C, calcium, sodium, potassium, chloride, H2O.

This supercharged IV treatment has it all. We reserve this one for those that really need a good pick-me-up.

High strength, and with the powerhouse antioxidant GSH, ‘Revive’ is for those that are in real need of a boost..

## WHAT TO EXPECT

Your IV treatment with Alive IV Clinics™ will be professional, peaceful and relaxing. We are all about experience, quality and great service. Your appointment will be for 50 minutes, with the treatment itself taking around half an hour. We want you to finish your treatment feeling positive, vibrant, happy, healthy and relaxed!

## YOUR FIRST TREATMENT

Your appointment will begin with a consultation with one of our nurses. They will discuss your general health and your main concerns, and will advise on the best approach to your treatments based on your individual circumstances. Your treating nurse may contact one of our medical doctors depending on the treatment type, or certain particular health conditions to ensure your treatment is right for you, and done safely.

## AFTER YOUR TREATMENT

You can get back to your day immediately after your IV treatment. A few things to follow to ensure thing go to plan:

- Apply pressure to the IV site for a few minutes after your drip has been removed
- Leave the band-aid applied to the drip site in place for at least 60 minutes
- Apply a cold pack if you have any swelling at the drip site
- Ensure you stay well hydrated for the rest of the day
- If you have any concerning symptoms such as dizziness or trouble breathing, either return to the clinic, or attend your nearest hospital.

These are extremely rare, but it always helps to be prepared!

## THINGS TO LOOKOUT FOR

Please seek urgent medical care if you experience any of the following:

- Significant swelling.
- Redness and pain at the drip site.
- Trouble breathing.
- Feeling faint or dizzy, or loss of consciousness.
- Any symptoms that worry you!

## WHEN TO HAVE ANOTHER

There are two ways to approach your IV treatments to ensure you get the most benefit. Regular treatments ensure your body has what it needs to function at its best. Booster treatments can supplement your general health at times when you are overworked, run-down, stressed, or recovering from an illness. Most of our patients have a routine treatment every 2-4 weeks, and a booster treatment as needed!
